Martin Tobias

Principal Solutions Engineer | Enterprise AI & Workflow Platforms | Strategic Account Pre-Sales | POC & Technical Validation

Greater Boston, MA | 617-852-9515 | mtobias2000@hotmail.com | linkedin.com/in/martin-tobias

EXECUTIVE SUMMARY

Principal Solutions Engineer with 20+ years of pre-sales experience in enterprise SaaS, AI, and operational data platforms, focused on strategic Fortune 500 accounts.

I earn executive trust in discovery, design solutions around the customer's actual workflows, and personally build and lead the proof of concept that proves the value.

Most recently at Bria Generative AI, I led technical engagements for P&G, Publicis, and Getty Images, covering AI governance, GPU-accelerated inference, and production readiness.

Before that, I managed a team of Solutions Engineers at Rockwell Automation, where I standardized discovery, demo, and technical validation methods across strategic pursuits and stayed hands-on in the largest POCs. Earlier at PTC, I delivered 30+ enterprise workshops, demos, and POCs, and helped turn technical evaluations into production deployments.

I build the playbook where none exists, so each later deal moves faster than the last. Hands-on by nature, I also design, build, and ship my own LLM-powered iOS applications, from API orchestration to monetization.

I work closely with AEs, CS, and R&D, and I carry customer evidence back to the roadmap.

SELECTED CAREER HIGHLIGHTS

- Influenced multimillion dollar enterprise pipeline across AI, SaaS, IoT, AR, and digital transformation platforms.
- Delivered 30+ enterprise workshops, technical validations, and POCs for global customers, translating technical requirements into production adoption.
- Led and mentored Solutions Engineering and technical teams supporting strategic enterprise opportunities.
- Partnered with Sales, Product, Engineering, Marketing, and executive stakeholders to align technical strategy with business objectives.
- Architected enterprise AI and cloud environments spanning AWS, Azure, APIs, GPU-accelerated inference, and complex enterprise integrations.
- Advised CTO, CIO, CMO, VP Engineering, and other executive stakeholders on technology strategy, AI governance, enterprise architecture, and transformation initiatives.
- Built repeatable discovery, demonstration, POC, and technical validation methodologies to scale enterprise sales execution.

- US citizen with prior professional engagement with defense contractors including General Dynamics and familiarity with Air Force installation environments; eligible and prepared to obtain Secret clearance.

PROFESSIONAL EXPERIENCE

BRIA GENERATIVE AI

Solutions Advisor | 2025

Led enterprise AI solution strategy and technical engagements for global brands including P&G, Publicis, and Getty Images.

- Owned end-to-end technical engagement across discovery, solution architecture, executive presentations, POCs, API integrations, governance, and production readiness.
- Partnered with enterprise sales and executive stakeholders to translate business requirements into scalable AI solutions and clear technical value.
- Architected GPU-accelerated inference pipelines and enterprise AI workflows, optimizing latency, throughput, and production scalability.
- Designed AI governance frameworks addressing brand compliance, responsible AI controls, prompt management, and content moderation for enterprise deployments.
- Built performance benchmarking environments exposing real-time inference metrics through Grafana to accelerate technical validation and executive decision-making.
- Partnered with Product and Engineering to translate customer requirements and voice-of-customer insights into roadmap priorities.
- Created integration prototypes and workflow mockups using Figma to accelerate customer alignment and cross-functional execution.

ROCKWELL AUTOMATION

Solution Engineer Manager | 2023–2025

Managed a team of 8 Solutions Engineers delivering technical discovery, POCs, and executive demonstrations for strategic enterprise accounts, while staying hands-on in the largest pursuits.

- Built and ran the SE playbook from the ground up, standardizing discovery, demo, and technical validation so repeat deal types moved noticeably faster.
- Partnered with Sales leadership and Account Executives on named strategic accounts, from first discovery call through close.
- Personally led POC design and delivery on the largest pursuits, tying platform capabilities to outcomes customers cared about.
- Designed tailored solution architectures across brownfield and greenfield environments, connecting plant-floor and enterprise data to business results.
- Coached and mentored the SE team on discovery, storytelling, and solution design, raising consistency across customer-facing work.

Smart Experiences Technical Manager | 2022–2023

Built and led a team of 3 engineers delivering immersive AR, digital manufacturing, and enterprise visualization experiences for executive-level customer engagements.

- Hands-on lead for interactive AR and real-time visualization solutions built with Unity, Vuforia, and Emulate3D, used in enterprise executive engagements.
- Integrated smart manufacturing technologies with enterprise PLM, ERP, and MES environments, demonstrating end-to-end operational workflows rather than isolated features.
- Translated emerging technology capabilities into business-aligned narratives that supported industrial transformation initiatives.
- Partnered across Engineering, Product, Sales, and customers to turn emerging technologies into enterprise demonstrations and technical validations.

PTC

Principal AR CoE Field Engineer | 2018–2022

- Delivered 30+ enterprise workshops, demonstrations, and technical validations for global customers across manufacturing and industrial markets.
- Led technical discovery and solution architecture across complex enterprise environments, aligning SaaS platforms with AWS and Azure cloud ecosystems.
- Converted technical evaluations into production deployments through structured needs analysis, solution design, executive communication, and ROI articulation.
- Applied machine learning models for predictive maintenance and anomaly detection within IoT-connected environments.
- Partnered with Sales, Marketing, Product, and R&D to refine go-to-market positioning, customer messaging, and digital transformation strategies.
- Served as a technical advisor to enterprise stakeholders evaluating cloud, IoT, AR, and connected-worker technologies.

IoT Senior Technical Sales Engineer | 2013–2018

- Led executive-level demonstrations, technical discovery, and solution presentations for C-suite and VP stakeholders.
- Translated complex IoT and enterprise technology capabilities into clear business outcomes and value propositions.
- Supported strategic enterprise opportunities through solution architecture, technical validation, POCs, and customer workshops.
- Mentored internal teams and partners to scale technical selling capabilities across the region.

AXEDA - ACQUIRED BY PTC

Technical Sales & Support Engineer | 2006–2013

- Supported enterprise customers across complex software and connected-device environments.
- Resolved high-priority enterprise platform escalations spanning firmware, BIOS, kernel, drivers, and application layers — building deep expertise in device lifecycle management, remote device operations, and endpoint troubleshooting across Windows and connected-device environments.
- Built internal tooling to improve issue resolution, technical support efficiency, and customer success workflows.
- Delivered product demonstrations and technical presentations at enterprise customer sites and industry events.
- Worked directly with customers to diagnose complex technical requirements and translate them into practical platform solutions.

ENTREPRENEURIAL EXPERIENCE

Maintain--it & ChefMeThat - AI-POWERED iOS APPLICATIONS

Founder & Sole Developer

- Conceived, architected, developed, and launched a production AI-powered SaaS application leveraging LLM APIs for intelligent maintenance scheduling.
- Owned complete product lifecycle spanning product strategy, UX, mobile development, backend architecture, API orchestration, monetization, deployment, and customer acquisition — including iOS/iPadOS provisioning, App Store distribution, device certificate management, and cross-platform mobile architecture across iOS, iPadOS, and macOS.
- Implemented subscription monetization using RevenueCat, VIN scanning, Carfax integrations, and multi-property support.
- Designed AI-powered workflows integrating external services and APIs into a consumer-facing production application.
- Managed application releases, cloud/backend services, analytics, and ongoing product iteration.

BRIA FIBO 2025 HACKATHON

Entrant / AI Application Developer

Built a generative AI application for storyboard and campaign creation, exploring practical applications of generative AI within creative workflows

CORE EXPERTISE

- Enterprise Solution Engineering
- Technical Discovery & Executive Value Alignment
- Enterprise SaaS Architecture
- AI / LLM / VLM Integration
- Data & Enterprise System Integration
- Cloud Architecture
- Technical Sales & GTM
- POC & Technical Validation
- Executive Presentations
- SE Leadership
- Digital Workspace & Endpoint Management
- Zero Trust & Identity Architecture
- Mobile Platform Architecture (iOS, iPadOS, Android)
- Agile & Scrum Methodologies

TECHNOLOGY

- AWS, Azure, Google Cloud
- REST, OAuth, SAML, SSO
- Python, JavaScript, Java, React Native, Git, Node.js, Visual Basic. SQL
- LLMs, VLMs, Generative AI, ML, MCP, Agentic AI, n8n, ComfyUI, HuggingFace
- Grafana, Power BI, Salesforce, VisualForce, ServiceNow
- PLM, ALM, SLM, ERP, MES, IoT, FT Optics, Cognite, ThingWorx, Kepware OPC-UA, Digital Thread
- Unity, Unreal Engine, Vuforia, Emulate3D, Figma
- Windows, macOS, iOS, iPadOS - endpoint & device lifecycle

EDUCATION AND CERTIFICATIONS

- **University of Cape Town**
  Marketing Management & Information Systems
- Microsoft Certified Professional
- Oracle Certified DBA
- Security Clearance: US Citizen; eligible and prepared to obtain Secret clearance. Prior professional engagement with General Dynamics and Air Force base environments.

LANGUAGES

- English
- Hebrew
